

EREMA – Klaus Lederer:

Mixed plastic feedstock preparation: Purification, Plastification, Agglomeration

- o Discussion of the importance of best possible material preparation preparing for the chemical recycling process.
- o comparison of Dry-Cleaning vs. Wet-Wash approaches (Pros-cons, cost comparison, safety...)
- o Overview and discussion of Agglomeration technologies and High Temperature Extrusion Melt Input preparation for thermos-chemical processes
- o Robust and safe high temperature melt preparation for pyrolytic processes
